## CLAIMS

1. A method of manufacturing a stamper for manufacturing an information medium, comprising the steps of:

manufacturing a photoresist master by forming at least a light absorption layer and a photoresist layer, in that order, on top of a substrate, irradiating light onto said photoresist layer to form a latent image from an opposite surface to that which contacts said light absorption layer, and then developing said latent image to form an uneven pattern;

forming a thin metal film on top of said uneven pattern of said photoresist master;

forming a stamper by forming a metal film on top of said thin metal film, and separating said thin metal film and said metal film from said photoresist master; and

providing a metal catalyst on a surface of said uneven pattern, activating said metal catalyst, and then washing the surface of said uneven pattern on which said metal catalyst is provided with a liquid, as preliminary treatments to the step of forming said thin metal film on said photoresist layer.

2. The method of manufacturing a stamper for manufacturing an information medium according to claim 1, wherein

pure water is used as said liquid for said washing.

3. A stamper for manufacturing an information medium, in a surface of the stamper an uneven pattern being formed in advance, the stamper being manufactured by the steps of:

manufacturing a photoresist master by forming at least a light absorption layer and a photoresist layer, in that order, on top of a substrate, irradiating light onto said photoresist layer to form a latent image from an opposite surface to that which contacts said light absorption layer, and then developing said latent image to form an uneven pattern; forming a thin metal film on top of said uneven pattern of said photoresist master; forming the stamper by forming a metal film on top of said thin metal film, and separating said thin metal film and said metal film from said photoresist master; and providing a metal catalyst on a surface of said uneven pattern, activating said metal catalyst, and then washing the surface of said uneven pattern on which said metal catalyst is provided with a liquid, as preliminary treatments to the step of forming said thin metal film on said photoresist layer.

- 4. The stamper according to claim 3, wherein pure water is used as said liquid for said washing.
- 5. A photoresist master comprising a substrate, a light
  20 absorption layer laminated on top of said substrate, and a
  photoresist layer which is laminated on top of said light
  absorption layer and is capable of having an uneven pattern
  formed therein by forming and subsequently developing of a
  latent image, wherein an activated metal catalyst is provided
  25 on a surface of said uneven pattern formed in said photoresist

layer, and the surface of said uneven pattern on which said metal catalyst has been provided is washed with a liquid.

- An information medium, in which a final uneven pattern is formed by using, as a negative pattern, an uneven pattern of a stamper manufactured by the steps of: manufacturing a 5 photoresist master by forming at least a light absorption layer and a photoresist layer, in that order, on top of a substrate, irradiating light onto said photoresist layer to form a latent image from an opposite surface to that which contacts said light absorption layer, and then developing said 10 latent image to form an uneven pattern; forming a thin metal film on top of said uneven pattern of said photoresist master; forming a stamper by forming a metal film on top of said thin metal film, and separating said thin metal film and said metal film from said photoresist master; and providing a metal 15 catalyst on a surface of said uneven pattern, activating said metal catalyst, and then washing the surface of said uneven pattern on which said metal catalyst is provided with a liquid, as preliminary treatments to the step of forming said thin metal film on said photoresist layer. 20
  - 7. The information medium according to claim 6, wherein said final uneven pattern is formed by direct transfer of said uneven pattern from said stamper.
  - 8. The information medium according to claim 6, wherein said final uneven pattern is formed by transfer of an

25

uneven pattern from a mother stamper, and said uneven pattern of said mother stamper is formed by transfer of said uneven pattern using said stamper as a master stamper.

9. The information medium according to claim 6, wherein said final uneven pattern is formed by transfer of an uneven pattern from a child stamper, and said uneven pattern of said child stamper is formed by transfer of an uneven pattern from a mother stamper, which has been formed by transfer of said uneven pattern using said stamper as a master stamper.
